PhytoGrow

PREMIX POWDER - GUT HEALTH - AQUA FEED SUPPLEMENT

COMPOSITION PER 1 KG

Cassia cinnamon powder 175 g
Garlic extract powder 50 g
Chicory extract powder 100 g
Thyme oil 55 g
Sodium butyrate 25 g
Calcium propionate 50 g
Bentonite up to 1 kg

GUARANTEED ANALYSIS PER KG

Cinnamaldehyde $\geq 5.00\text{g/Kg}$, calcium propionate $\geq 35.0\text{g/Kg}$, thymol $\geq 35.0\text{g/Kg}$

INDICATIONS

Natural growth promoter and gut health enhancer for all species and ages.

DIRECTIONS FOR USE

Mix homogeneously with feed at 0.6-5 kg/ton of complete feed. Recommended doses: Broilers: 0.6-1 kg/ton of complete feed. Layers and breeders: 1-2 kg/ton of complete feed. Ruminants: 1-3 kg/ton of complete feed. Shrimp and fish: 2-5 kg/ton.
PhytoGrow does not contain antibiotics.

STORAGE AND HANDLING

Store well closed in a cool and dry place. Do not eat, drink or smoke while handling.
Avoid any contact with the product.

Net weight: 1 Kg Batch and manufacturing date: See the top of the bag.

Expiry date: Two years after the date of manufacturing

VIJAYA DURGA AQUA FEEDS AND NEEDS

D NO 5-201, Main Road, KALLA, West Godavari, Andhra Pradesh - 534237

CRESCO Objectives

CRESCO aims to cultivate and produce huge quantitative of Algae for Aquaculture Industry for use as Feed and Nutrition agent. It aims for Mass production of Spirulina and value added products with an initial Target of 1 Ton per month. Gradually it aims to develop large scale Algae ponds and be one of the largest producer of Spirulina – both for domestic consumption and also for International exports.

CRESCO and MICROALGAE Production

Cresco aims to produce large quantities of Algae and Microalgae. This would encompass production of economically important algal species like *Spirulina sp*, *Chlorella sp*, *Dunaliella sp*, *Hematococcus sp*, *Nanochloropsis sp*, *Diatoms*, etc. These are highly useful in the Aquaculture industry as Fish Nutrition.

CRESCO ALGAE FORT

Benefits

Copefloc technology is suitable for adoption in fish and shrimp culture practices due to the following benefits.

- ii The overall production costs for the fish/shrimp culture are reduced as there is no exogenous feeding.
- ii Copefloc technology does not require any filtration system, and the water exchange is minimized as excess sediment is removed.
- ii The water quality issues are reduced due to pollution in the pond bottom, viz., black soil formation and odour related to overfeeding and high protein feed.
- ii Disease incidence is reduced as live feed forms are considered nutrient capsules rich in vitamins that are known to improve the overall health disease resistance in fish/ shrimp at a higher risk in the intensive culture systems.

- ii Copefloc also improves the colour and attractability of cultured fish and shrimp as they are rich in amino acids, polyunsaturated fatty acids, and astaxanthin, imparting red to the skin and flesh.

However, implementing this concept in indoor culture systems is less effective.

Conclusion

Owing to the various advantages over traditional farming practices, copefloc technology is more sustainable for developing organic shrimps by incorporating natural inputs eliminating the use of any hazardous chemicals or antibiotics to yield nutritious and safe products to the consumers. Copefloc technology will also pave the way for pellet-free aquaculture practices, increasing its sustainability.
